Ryan Martinez

Full Stack Software Engineer · Open to remote and hybrid

Riverside, CA · ryan.s.martinez96@gmail.com · linkedin.com/in/rymartinez · ry-mart.com

SUMMARY

Full stack engineer with 6+ years building business software, from SaaS warehouse systems to manufacturing apps that hundreds of people use every shift. At Glenair I help replace a decades-old terminal system with React, TypeScript and Python, and set the frontend standards for a team of 10 to 15 engineers.

EXPERIENCE

Glenair, Inc. Full Stack Software Engineer — Apr 2022 – Present

Modernization (MCU) team replacing "Borg", the company's legacy ASCII terminal system, with React, TypeScript, Python and SQL Server web apps.

- Built the quality control app used by 250 inspectors on 35,000 jobs a month: guided step-by-step inspections, customer requirement checks, trace validation, NCR, NCMR and MRB workflows, and certificates of conformance.
- Built the stock picking app for 50 warehouse staff handling 15,000 picks a month, with inventory verification, trace history from stock to customer order, and a permission-gated admin console for resolving issues.
- Built and migrated the 12M+ document company archive (30 years) to SQL Server and on-premises MinIO storage; new indexing cut searches from 10+ seconds to about 200 ms.
- Set the team's frontend standards: created the template repository every new app starts from and a shared npm package, published by GitHub Actions, with authentication, navigation, global search, notifications, settings, widgets and strictly typed clients for 70 internal APIs.
- Helped move the backend boilerplate from Flask to FastAPI, started a shared Python API package, and am helping adopt pytest and Playwright.
- Mentored 12 engineers (5+ interns and 7 new hires): plan and delegate their work and review every change they commit.

Wolin Design Group Full Stack Software Engineer — Mar 2021 – Apr 2022

- Shipped enhancements to a SaaS warehouse management system (AngularJS, Java, PostgreSQL) running in 20+ large warehouses.
- Took over building and rolling out customer deployments on AWS (EC2, RDS), including a Dockerized Python RF scanner app that floor staff used to move inventory between locations.

Ohm Vision Software Engineer (Contract) — Sep 2019 – Jan 2022

- Built custom EDI pipelines in .NET (C#) for 10+ medical records trading partners, mapping each partner's format to standard EDI and back, and verified every mapping with test cases.

Iteris, Inc. IT Intern · Helpdesk support; automated legacy system syncs with Apps Script. — May 2019 – Jul 2020

The Coder School Lead Code Instructor · Taught Python, Java and C++; coached new instructors. — Aug 2018 – May 2019

PROJECTS

- **ry-mart.com**: Personal site on Cloudflare Workers, D1 and R2 (React Router, TypeScript): blog editor behind Cloudflare Access that publishes through a GitHub App, photo uploads, and CI with Playwright end-to-end tests.
- **Online multiplayer volley game**: Real-time 1v1 over WebSockets with a server-run match on Durable Objects, client prediction and smoothing, and two-minute reconnects.
- **Taco Trek race tracker**: Live GPS tracking for a 300-runner 50K: spectator map, race control dashboard and missed-checkpoint alerts on Workers and D1, with batched uploads to keep database writes low.

SKILLS

Languages	TypeScript, JavaScript, Python, C#, Java, SQL
Frontend	React, React Router, AngularJS, Tailwind CSS
Backend	FastAPI, Flask, .NET, REST API design, WebSockets
Data	SQL Server, PostgreSQL, MySQL, Cloudflare D1, MinIO / S3
Cloud and DevOps	GitHub Actions, Cloudflare Workers, AWS (EC2, RDS), Docker, IIS
Testing	Playwright, pytest, Vitest

EDUCATION

California State University, Fullerton B.S. Computer Science — 2020
